

GlobalCare provides network optimization to maximize the savings on each and every medical claim.

Our approach is to analyze complex situations where membership is dispersed by geography, demographics or plan design and then assign each member to a best-in-class Primary and Secondary network.

**Network Routing & Repricing Management**

## PRIMARY NETWORK:

With over 150 PPO network relationships, GlobalCare can recommend for every household the network which optimizes access, savings and costs while ensuring that preferred providers and medical facilities are available. GlobalCare configures custom network solutions for any group, family or individual. We manage the network enrollment and claims routing and re-pricing on behalf of the Payer. The choice is always yours.

## SECONDARY NETWORK:

Inanet™ by GlobalCare is our Secondary network personalized to every member to maximize savings on all out-of-network medical claims. GlobalCare designs a custom travel network to the Primary Network with access to many regional networks along with a national PPO network. Access privileges to these networks are exchanged with deeper discounts granted through compliance to steerage requirements imposed by the network.

GlobalCare delivers a comprehensive program to intervene during an out-of-area medical event. The objective is to obtain the greatest financial return through deployment of proactive, interventionist measures to ensure members gain access to the most appropriate provider and level of care at anytime, anywhere.

## The program includes:

Medical Nurse Help Desk available 24 hours a day, 7 days a week where a Registered Nurse provides medical triage, assessment with a recommendation for care along with a medical referral if requested or required.

Provider Service Notification™ Card - identifies authorized networks available for Secondary access.

eMDnet™ as a web-based provider lookup and referral service where a Provider Service Notification (PSN) or medical referral can be issued on-demand to facilitate access to a directed network.
