

LEADING THE WAY TO REDUCE HEALTHCARE COSTS - *ANYTIME, ANYWHERE*

Founded in 1994, GlobalCare has focused on providing access to the most appropriate level of care for every life, for every medical event, all with the greatest level of savings

Our foundation was built on providing premier international medical assistance services to multi-national corporations as well as business and leisure travelers and tour companies. Whenever, wherever someone traveled, GlobalCare was available to service any medical situation through an international network of providers, a comprehensive care management program delivered by a Nurse Help Desk and a proprietary data management technology.

In the late 1990's, GlobalCare experienced an ever increasing demand from its highly satisfied international clients to provide similar medical access and support while out-of-area or out-of-network within the United States. We responded by deploying the full international medical access and assistance model here at home, while also enhancing it with a composite of over 150 of the best PPO networks available.

The result, ever increasing levels of client satisfaction as reported by covered lives getting access to quality care, a dramatic reduction in out-of-area or out-of-network medical costs along with significant improvements in efficiency for managing the claims administrative process.

Today, our clients benefit by utilizing GlobalCare's extensive PPO network to place individuals in the finest primary network for provider access and discounted savings. With more choice of networks, every individual has the opportunity to have a personalized PPO network where they can gain access to their preferred providers while maximizing the savings. And when they travel, and they will, GlobalCare provides a personalized travel or secondary network to provide the same level of access and savings they have come to expect.

Our clients recognize the value of partnership, by receiving from a single-source many choices to save on healthcare costs while improving the efficacy of administrative services. More choices, more care, and more savings.
